HearClear: Expanding Access to Specialised Hearing Care Across India

24 November 2026 | Features

HearClear India is building a specialised hearing healthcare network focused on making hearing diagnostics, hearing aids and rehabilitation services more accessible, particularly for senior citizens. Founded in 2020, the company combines audiology clinics, home-based hearing assessments, professional consultations and hearing-aid solutions to address gaps in hearing healthcare access. Its model brings diagnostic services and hearing devices closer to patients through a growing network of clinics and partnerships.

Problem

Hearing loss can affect communication, social participation and quality of life, particularly among older adults. However, limited awareness, social stigma, affordability concerns and inadequate access to qualified audiologists often delay diagnosis and rehabilitation. Patients may also find it difficult to identify suitable hearing devices and access reliable after-sales support.

Product

HearClear offers a comprehensive hearing-care ecosystem covering audiological assessments, hearing-aid selection, fitting, trials, servicing and rehabilitation. Its services include Pure Tone Audiometry (PTA), Impedance testing, OAE, BERA and VNG assessments, along with home-based hearing tests. The company provides hearing aids from international brands, including Signia, and offers professional fitting and follow-up support.

Proof

HearClear's website reports more than 1 lakh ears under its care, over 150 hearing-aid options, 100+ partner clinics and a customer rating of 4.8. A separate company newsroom reports 44+ audiology clinics across 40+ cities and more than 50,000 customers served. In 2024, the company expanded its presence in Mumbai with a new clinic at Hiranandani Estate. It has also partnered with Neuberg Diagnostics to establish hearing-care services within diagnostic centres.

People

HearClear is led by Vineet Narang, Founder and Managing Director. The company's co-founding team also includes Shubham Chugh and Shivam Narang, according to startup ecosystem records. Its operations are supported by audiologists and hearing-care professionals across its clinic network.

Purse

Publicly available sources do not provide a reliably verified total funding amount or a confirmed institutional funding round for HearClear. Corporate records identify its operating entity as Gang Oh Innovations Private Limited, incorporated in September 2020. Its business model centres on hearing-aid sales, audiology services, diagnostics and associated rehabilitation support.

Plan

HearClear aims to expand its network of hearing clinics and experience centres across India, including smaller cities. Its stated ambition is to build a network of 500–600 clinics, supported by home-care services. Partnerships with diagnostic providers, community outreach programmes and access to professional audiologists form part of its broader expansion approach.

Why it matters

Hearing healthcare requires more than access to hearing devices; it involves early diagnosis, professional assessment, appropriate fitting and continued rehabilitation. HearClear's specialised network model seeks to address these interconnected needs, particularly for older adults who may face barriers to accessing regular audiology services.

FAST FACTS

Particular	Details
