Eppendorf India, Stilla Technologies to offer complete digital PCR workflow solutions

28 April 2022 | News

The companies will offer an optimised workflow for a wide range of applications including liquid biopsy, sentinel pathogen testing

Eppendorf India will distribute the products of Stilla Technologies in India, Bangladesh, Nepal and Sri Lanka. The agreement allows Eppendorf India to offer the sample preparation systems and digital PCR on the six-colour naica system.

With this partnership, the companies will offer an optimised workflow for a wide range of applications including liquid biopsy, sentinel pathogen testing, infectious disease assays, overall cancer research and drug discovery.

The 6-colour naica platform is being quickly adopted, with end-users developing high multiplex dPCR assays that have been previously unattainable. This adds to the growing body of evidence for the need to study more molecular targets per sample to provide actionable insights.
