HCG announces major expansion with establishment of two new cancer care centres in Bengaluru

15 May 2024 | News

Two new facilities to offer patients the complete range of advanced cancer care

Healthcare Global Enterprises Limited (HCG) is expanding its footprint in Bengaluru with the launch of its two new state of the art, comprehensive cancer care centres in Whitefield and North Bengaluru.

With this strategic expansion, India's largest cancer care network plans to extend specialised and advanced modes of cancer treatment to these two highly populated neighborhoods in the city, making them the third and fourth in its hospital network in Bengaluru. The two strategically located centres will commence operations in early 2025.

Both facilities will provide the entire spectrum of cancer care, from high precision diagnosis to personalized treatment plans, all under one roof. The Whitefield and the North Bengaluru facility with integrated and holistic cancer care will accommodate a total of 125 beds.

The two additions to the HCG chain of cancer care hospitals in the city share locational advantage similar to the HCG's flagship Centre of Excellence at KR Road and Double Road with a total of 300 beds.

Along with these four modern centres, HCG has three daycare centres in the residential neighborhoods of Kalyan Nagar, Malleshwaram and Banashankari.

HCG plans to add two new day care centres to the city network to reduce travel time and make cancer care easily accessible to patients who need repeated treatments like chemotherapy.

With the introduction of the MR LINAC radiation system in its North Bangalore facility, HCG is poised to revolutionise radiation therapy in the state. This state-of-the-art technology integrates magnetic resonance imaging (MRI) with linear accelerator (LINAC) to improve clinical outcomes, decrease side effects and reduce treatment period.
