Max Healthcare partners with Medtronic to launch state-of-the-art surgical skill lab in Delhi

18 September 2025 | News

Max-Medtronic Skill Lab aims to train surgeons and other healthcare professionals from across India

Max Healthcare, one of the largest private sector healthcare services companies in India, and Medtronic, a global leader in healthcare technology, have announced the inauguration of the Max-Medtronic Skill Lab at Max Super Specialty Hospital, Saket, New Delhi.

The facility is designed to advance training in minimally invasive surgical techniques and marks a significant step in their shared commitment to clinical excellence and education.

This strategic collaboration aims to advance medical education and clinical training in laparoscopic and minimally invasive surgical techniques. In addition to training, Max-Medtronic Skill Lab will also prioritise educating patients and caregivers about the benefits of these advanced minimally invasive procedures, such as faster recovery, smaller incisions, reduced infection risk, and less tissue trauma compared to traditional surgeries.

The lab will offer comprehensive, structured training modules for a wide range of medical professionals including surgeons, nurses, OT technicians, and paramedics, ranging from hands-on workshops to advanced upskilling sessions. Spearheaded by Max Healthcare’s experienced in-house faculty and facilitated by Medtronic, these programmes aim to provide a robust, practical, and impactful learning experience for all medical professionals.

As part of this collaboration, both partners will also focus on regular upskilling programmes for paramedical staff, an often overlooked yet critical component of the surgical care team. The Max-Medtronic Skill Lab is set to become a benchmark in clinical education and innovation, aligning with the Government’s vision for a skilled and empowered healthcare workforce.
