# Cardiotrack partners with Paras Hospitals

22 January 2018 | News

The hand-held IoT device that is driven by Artificial Intelligence (AI) will capture clinical grade ECG data using cutting-edge technology and ensure data portability through smart android-based devices.

Bengaluru-based start-up, Cardiotrack has expanded its presence in North India with its partnership with Gurgaon based multi-speciality hospital, Paras Hospitals. This expansion will consolidate Cardiotrack's position as a leading provider of AI-based cardiac care solutions.

Cardiotrack deals in providing best-in-class predictive diagnosis for cardiovascular diseases. The startup believes that the partnership with Paras Hospitals is the right step forward to address the growing concern with regard to heart disease, and deliver cardiac solutions that are real-time and preventive in nature.

Cardiotrack will be deployed across all Paras centres. The hand-held IoT device that is driven by Artificial Intelligence (AI) will capture clinical grade ECG data using cutting-edge technology and ensure data portability through smart android-based devices.

Headquartered in Singapore, Cardiotrack has a presence in over 15 countries including Myanmar, Mexico, Indonesia, Tanzania, Norway, Canada and Argentina among other countries. The pocket sized device has been well received by hospitals and primary health centres in tier 2 cities and rural areas.

The Cardiotrack platform is designed to fulfil all the basic requirements of a primary care clinic. Using Cardiotrack's technology and AI platform, doctors can detect heart health problems accurately, consult specialists, refer and track patients, maintain medical history and start the intervention process.
