

Merck to launch three new products at INTERPHEX 2018

29 March 2018 | News

Attendees are invited to learn more about how Merck is innovating flexible manufacturing to save customer's time and money

Merck, a leading science and technology company, will introduce three new products for the flexible manufacturing of biologics at INTERPHEX, April 17-19, in New York City, USA.

Pellicon® Capsule with Ultracel® Membrane. This first-of-its-kind single-use tangential flow filtration device is used for bioprocessing of antibody-drug conjugates and monoclonal antibodies.

Millipak® Final Fill Filter. These filters provide maximum product yield in high-value, small-volume processing.

Mobius® Power MIX 2,500-Liter and 3,000-Liter large-scale single-use mixers. These mixing systems combine high-performance technology with design elements that make them easy to use when mixing the most challenging buffers, media and biopharmaceutical ingredients.

Attendees are invited to learn more about how Merck is innovating flexible manufacturing to save customer's time and money.

Merck experts will share best practices and insights across a variety of pharmaceutical manufacturing topics at the various presentations and panel discussions.
