

## NCI, IIT-B, TMC sign MoU for cancer research

03 May 2018 | News

**The purpose of the MoU is to facilitate scientific and programmatic collaborations between NCI, IITB, and TMC in basic and clinical proteogenomic studies.**

The National Cancer Institute's (NCI) Office of Cancer Clinical Proteomics Research, part of the U.S. National Institutes of Health, along with the Indian Institute of Technology Bombay (IIT-B) and Tata Memorial Centre (TMC) have signed a Memorandum of Understanding (MoU) on clinical proteogenomics cancer research. The MoU between NCI, IITB, and Tata Memorial Centre represents the thirtieth and thirty-first institutions and the twelfth country to join the International Cancer Proteogenome Consortium (ICPC).

The purpose of the MoU is to facilitate scientific and programmatic collaborations between NCI, IITB, and TMC in basic and clinical proteogenomic studies leading to patient care and public dissemination and information sharing to the research community.

The scope of the collaboration requires NCI to assist IITB and TMC in adopting and implementing the Clinical Proteomic Tumor Analysis Consortium workflows as appropriate and to integrate innovative technologies in workflows based on commonly diagnosed cancers in India.
