

KRF invites collaborations for bowel disease research

15 May 2018 | News

Proposals for Synergy Awards will be accepted online through September 17, 2018

The Kenneth Rainin Foundation will accept proposals for its Synergy Awards program from May 21 through September 17, 2018.

These awards fund new, cross-disciplinary research collaborations to accelerate progress in the study of Inflammatory Bowel Disease (IBD) around the world.

"The Rainin Foundation invests in groundbreaking and unconventional methodologies that prioritize patient impact," said Laura Wilson, PhD, Director of Health Strategy and Ventures for the Rainin Foundation. "Our Synergy Awards encourage partnerships between researchers, clinicians and industry that are aimed at improving the prediction and prevention of IBD and encouraging innovative approaches."

The awards support teams of up to three individuals for a maximum of \$100,000 per investigator, up to \$300,000 per project. Teams need not have worked together prior to their proposal, but must demonstrate that the proposed research could not be achieved without the collaboration.

The Rainin Foundation supports projects that engage in a combination of basic, clinical and translational science. "This award makes it possible for researchers to forge unprecedented collaborations and pursue novel ideas in IBD research," said Wilson.

Proposals will be accepted through the Foundation's online application system. Researchers from any scientific discipline at both nonprofit and for-profit institutions worldwide can apply for the Synergy Award. Projects that demonstrate significant progress toward their research goal after one year may be eligible for additional funding.
