

Indian medical devices may get Indian standardization

21 September 2018 | News

"And, from old devices to new, most of the important devices will carry Indian standardisation from the BIS"

A range of medical devices, old or new, will soon have an 'Indian standard' and nearly 1,000 products are presently being benchmarked.

NITI Aayog member V K Paul, in his address at a conference MedTekon 2018, said the standardisation is expected to be completed in the next two months.

"We don't have any Indian standards (for medical devices). As we speak, about 1,000 products' standards are being completed, and the deadline for that is about two months from now.

"And, from old devices to new, most of the important devices will carry Indian standardisation from the BIS," he said.

The Bureau of Indian Standards (BIS) is the national standards body of India working under the aegis of the Ministry of Consumer Affairs, Food & Public Distribution.

The conference MedTekon 2018 -- MedTech Vitalising Ayushman Bharat, organised by Medical Technological Association of India (MTAI) was also attended by Swedish envoy Klas Molin.

Molin said Sweden, both at government and company-level, would like to engage with India when it comes to health and life sciences.

Paul, a key architect of the Centre's flagship health scheme Ayushman Bharat, also urged Sweden to partner with the country in this mission and asked the private medical technology companies of India to be "catalyst of change" in this "revolution waiting to happen".

The 'Ayushman Bharat' scheme aims to holistically address health (covering prevention, promotion and ambulatory care) at primary, secondary and tertiary levels.

MTal welcomed the move by the government to bring Indian standardisation, but cautioned that it should not "dilute the existing" global standards that companies adhere to.

MTal Chairman Pavan Choudhary and other members said that several Indian med-tech firms are already following global best standards.

"The new standards would help bring into those players who do not conform to such standards. But, the Indian standards, once they are brought in, will need a lot of harmonising with the existing global norms," said Probir Das, director of MTal.
