

Nayati Healthcare introduces eICU at Nayati Medicity in Mathura

15 October 2018 | News

Creates new benchmark by taking cutting-edge healthcare technology to a tier III city

Nayati Healthcare has announced the introduction of India's first Digital Intensive Care units (eICU) at its flagship hospital, Nayati Medicity at Mathura. The introduction of the state of the art technology, reiterates Nayati's commitment of bringing the world's most advanced healthcare services and technology to the people in Tier 2 and Tier 3 cities. With this, Nayati Medicity has become India's first hospital to adopt a secured cloud-based model which uses minimal infrastructure cost, making it affordable.

The technology, introduced in collaboration with Cohere Med, a health-tech company based in Bangalore, will allow clinicians to monitor multiple critically ill patients remotely, alert ICU staff to any issues, and ensure early intervention to improve outcomes.

The newly installed system uses Critibot (a registered trademark of Cohere Med) a bot built to serve customized information for every doctor. The goal is to optimize clinical expertise and facilitate 24-hour-a-day care by ICU caregivers.
