

## HMD procures 2018 Good Design Award in Japan

02 November 2018 | News

**Recently Hindustan Syringes & Medical Devices Ltd (HMD) became the first set of Indian Manufacturers of Disposable Medical Devices to achieve MDSAP certification**

Hindustan Syringes & Medical Devices Ltd (HMD), one of the largest manufacturers of Disposable Syringes in the World and the largest for Auto Disable syringes has been awarded the prestigious '2018 Good Design Award' for HMD's Safety IV Cannula - Cathy Sipclip earning recognition in the category of Medical Care Products at the Good Design Award 2018 hosted by the Japan Institute of Design Promotion in Japan.

Japanese Good Design Award 2018 is an additional feather in the cap to the MDSAP (Medical Device Single Audit Plan) quality assurance certification from UL (Underwriters Laboratories, USA) and ICMED (Indian Certification for Medical Devices) certification HMD received from QCI (Quality Council of India). ICMED Certification process allowed us to build competencies and confidence needed to strive for MDSAP and winning the Indian Design Award from DIPP helped us in winning the prestigious Japanese Good Design (G-Mark) Award - explained Mr. Rajiv Nath, Jt. Managing Director of Hindustan Syringes & Medical Devices.

HMD's Safety IV Cannula - Cathy SiPClip, the most revolutionary technology and patented design greatly minimizes the chances of accidental needle stick injury among health workers and nursing staff when they attach IV Catheter and remove the blood infected needle from a patient which results in numerous unfortunate infections and even deaths, particularly in developing countries like India.

The auto protection technology of Safety I V Cannula Cathy SipClip is designed to provide Involuntary Activated Safety due to presence of a protection device SipClip which encapsulates the tip of the used needle, when introducer needle is extracted from the Catheter.

Mr. Rajiv Nath, a strong advocate for preventive measure of Blood borne infections like Needle stick injury by SIP (Sharps Injury Prevention) and of Injection Safety is seeking a National Swach Injection Abhiyan. He has urged the Govt. to accelerate a switch to "Auto Disable Syringes" to limit HIV and Hepatitis Epidemic.

There are villages with over half the population infected with Hepatitis or HIV due to reuse of Syringes by quacks. In order to prevent reuse of syringes and contain the spread of infection, it is advisable and recommended to use AD syringes

specifically designed to prevent reuse. This reuse prevention has been strongly advocated by WHO. Similarly next highest risk is an accidental injury from a Needle Stick and unsafe blood exposure.

Andhra Pradesh government has already taken a lead in this regard and has declared the State of Andhra Pradesh as Safety Injection Use State.

“HMD will continue pursuing excellence in user-friendly intuitive innovative design and contribute towards our ongoing commitment of aiding access to affordable and safe healthcare for common people in India and other developing Countries”  
Added Mr. Rajiv Nath.

The Good Design Award was founded in 1957 as the Good Design Product Selection System (or G Mark System), by the Ministry of International Trade and Industry (the current Ministry of Economy, Trade and Industry). It is the only system in Japan to comprehensively evaluate and recommend design and the G-Mark carries substantial International Prestige.
