

## AgeLess Clinic launches SculpSure Technology for body contouring

10 December 2018 | News

**SculpSure is the first FDA-cleared laser treatment for noninvasive lipolysis which has rendered cooling based technologies passé.**

The AgeLess Clinic, a leading aesthetic clinic chain in Mumbai, headed by Celebrity Skin Expert Dr. Harshna Bijlani, is now the first clinic in India to introduce SculpSure - *the latest breakthrough in non-surgical fat reduction from the West* ~. SculpSure is the first FDA-cleared laser treatment for noninvasive lipolysis which has rendered cooling based technologies passé. It is a non-surgical technique with zero downtime. SculpSure has received USFDA clearance to reduce stubborn fat in the belly, love handles, back, thighs and now double-chin as well!

“What I love about Sculpsure© is, in my experience it not only helps with fat loss but also skin tightening simultaneously! It is such an improvement over fat freezing based technologies and has a lot less associated risks.” Dr Harshna Bijlani, Medical Head, The AgeLess Clinic

How it works - SculpSure© is a safe and effective light-based treatment that precisely targets fat cells under the skin, destroying up to 24% of treated fat in a 25 minute procedure.

Over time, these damaged fat cells are naturally absorbed and removed from the body, with results seen as quickly as six weeks, and optimal results typically seen at 12 weeks. Since there is no recovery time with SculpSure, patients can return to normal activities immediately. SculpSure is also clinically proven to be comfortable and well-tolerated over 90% patient satisfaction.
