

HP brings full colour 3D printing platform to India

23 January 2019 | News

New HP Jet Fusion 300/500 series enables engineering- grade functional parts in full colour, black or white.

HP Inc. has expanded its 3D printing portfolio in India with the introduction of its new Jet Fusion 300/500 series of 3D printers, the industry's first 3D printing technology to enable manufacturers to produce engineering-grade functional parts in full color, black or white in a fraction of the time of other solutions.

The new Jet Fusion 300/500 series complements HP's existing industrial-grade Jet Fusion 4200/ 4210 3D solutions which deliver the lowest cost per part and are designed for manufacturing environments.

Currently, the new 3D printing facility at AP MedTech Zone, Vizag features HP 4200 MJF printer among many other 3D Printers.. This facility is using the printers for prototyping and batch production of parts for medical devices like MRI, ECG, Ultrasound machines and so on.

"HP is committed to transforming Asia's \$6 million manufacturing industry, with its diverse collection of global brands and contract manufacturers", said Rob Mesaros, Head, 3D Printing & Digital Manufacturing, HP Asia-Pacific & Japan.
