

IBSA Pharma launches liquid formula for Hypothyroidism

28 February 2019 | News

The only FDA-approved liquid levothyroxine formulation available

IBSA Pharma is a world leader in the treatment of thyroid disease and has a diversified product portfolio of prescription drugs. With products on five continents and in over 80 countries, IBSA manufactures 14 million vials of hormones, 300 million soft gel capsules and 60 million packages of finished products every year.

IBSA Pharma Inc. announced that its Tirosint-SOL (levothyroxine sodium) oral solution is now available in the US market for the treatment of hypothyroidism and pituitary thyrotropin suppression.

Tirosint-SOL is the first and only liquid levothyroxine formulation approved by the FDA and is indicated for patients of all ages. Levothyroxine is a hormone that is normally produced by the thyroid gland. It is used to treat patients who suffer from hypothyroidism or inadequate levels of thyroid stimulating hormone (TSH).

Tirosint-SOL is the latest product to be launched in the US by the IBSA Pharma Inc., a fully-owned subsidiary of IBSA Institute Biochimique SA. Tirosint-SOL's unique liquid formulation is made without excipients such as dyes, wheat starch (gluten), lactose, alcohol, sugar and others that may contribute to tolerability and absorption issues. It is packaged in monodose ampules in 12 different dosage strengths, including a 13 mcg/mL dose. Tirosint-SOL may be administered either directly into the mouth or diluted in a glass of water.
