

NephroPlus introduces Peritoneal Dialysis Program

03 June 2019 | News

First time a Dialysis service provider is providing Peritoneal Dialysis Service in India

NephroPlus, India's largest dialysis centre network that is focused at redefining dialysis care, introduces Freedom- A Peritoneal Dialysis Program in India. Given NephroPlus' presence in over 100 cities and its vast experience of servicing over 15000 dialysis patients, the Freedom- A Peritoneal Dialysis Program is designed to provide the highest clinical care in the comfort of a patient's home.

In an aim to provide the best possible treatment solutions for its Dialysis patients, NephroPlus analyzed the problems that patients face in regards to non-compliance, lack of training, demand & supply, poor diet etc. and subsequently crafted a unique solution that would focus on training patients, the most important aspect in the treatment therapy. The Freedom Program will further ensure timely supply, monthly consultation, online access of clinical data and monthly diet consultations.

Speaking on the introduction of Peritoneal Dialysis Solution, **Vikram Vuppala, Founder & CEO, NephroPlus** said, "Anyone who is diagnosed with ESKD should have all the options for treatment presented to them along with the pros and cons. They, along with their family and the treating doctor should then decide which therapy they want to opt for. Keeping this in mind, we have come up with Freedom, a unique, first of its kind PD service by a service provider and not a manufacturer of PD fluids. We will ensure a hassle-free experience and best in quality care for patients who opt for PD."

"I have personally been on Peritoneal Dialysis for over 5 years out of my total duration of 23 years in dialysis. My time on Peritoneal Dialysis was the most productive time" says Kamal Shah, Co-Founder & Director, Guest Services, NephroPlus.
