

Medicalwale launches DBIOMS

06 March 2020 | News

DBIOMS is a technology enabled business software solution for doctors

Medicalwale, a knowledge-based, omni-channel healthcare platform has launched DBIOMS (Doctors Business and Internal Operation Management Systems) for Docnity/Doctor Community.

DBIOMS is a technology enabled business software solution for doctors to expand their business portfolio and connect with their own community without any hassle.

Through this tech enabled solution, doctors can not only manage multiple intricacies such as managing online consultancy and clinic, handling various business ledgers in a jiffy but also connect with different doctors and discuss case studies.

In India, healthcare sector is experiencing a new wave of opportunity with advanced developments and technologies. The concept of mHealth has become an influential factor in today's time with growing proliferation of digitalization. Through various online apps, the communication between doctors and patients is becoming seamless. In India, there are nearly 60,000 healthcare related apps on Android and IOS as mobile technology makes huge inroads in the healthcare space. Built on the accessibility and affordability of mobile phones around the world, the mHealth provides new set of opportunities for improving health care services, even tier 2 and tier 3 areas. The mHealth in India strives to address the challenges of making healthcare initiatives far more accessible and speedier, in an improved and cost-effective manner in India.

Commenting on the launch of DBIOMS, Obaid Abdul Aziz, Founder, Medicalwale.com said "We at Medicalwale.com aim to empower India with access to world-class personal care and healthcare through innovative technologies, appropriate products and efficient services. Being an omni-channel healthcare platform, we promise to serve every Indian and global citizen transparent, economical and affordable health, beauty & fitness services. With DBIOMS, we believe to cut down all the complexities for doctors by providing them hassle free app to communicate and connect with their patients and other doctors. Medicalwale.com aims to put India at the top of the global healthcare chart and provide access to consumers to the best of the facilities with their platform."

"mHealth in India is one of the biggest technology trends. With the latest mobile technology, it has now become easy to touch upon rural areas and provide them with quality healthcare services at affordable cost. With high proliferation of mobile phones across demographics, there are high chances to reach large pockets of underserved population in India", adds Obaid Abdul

Aziz.

DBIOMS manages 3 different profiles of a doctor namely – Health, Business & Social with complete security.
