GOQii launches contact tracking features for COVID-19 alert

16 March 2020 | News

The updated feature will effectively help in social distancing

In the wake of coronavirus, Vishal Gondal led GOQii, the smart-tech-enabled preventive healthcare company has launched 'Contact Tracking' features, to help users track every movement, activity and also track those who have been in close contact with them.

The updated feature will effectively help in social distancing as is recommended by the World Health Organization.

A first-of-its-kind initiative especially in cases of a positive detection, where users can immediately backtrack every movement and individuals that one has come in contact with, in the last few days. This will ensure prevention, quick detection of virus carriers and thus curtail the spread of the virus.

GOQii has specially updated the app to help users self-track, to the level of keeping a tab on every person one must have

come in contact with, like cab sharing apps like Uber, Lyft, Ola, E-commerce and food delivery services like Amazon, Flipkart, Swiggy and Zomato. One can record the person's name, contact number as well as photographs.

GOQii app follows the privacy policy. The data logged by the user is private to the user. The privacy settings in the app let the users decide whether they want to share their logs publicly, with just their friends or keep them visible only to themselves.

Healthcare authorities and professionals can leverage GOQii's cutting-edge wearable, artificial intelligence & coaching ecosystem to accelerate COVID-19 surveillance and interventions.
