

Transasia's latest manufacturing facility receives ISO certification

02 April 2020 | News | By Vallari Mathure

The facility and processes were subjected to a stringent evaluation by the UL LLC India, a global safety certification company.

Transasia Bio-Medical Ltd's recently inaugurated state-of-the-art manufacturing unit at SEEPZ has been certified by ISO and ICMED. The facility and processes were subjected to a stringent evaluation by the UL LLC India, a global safety certification company. Post assessment, we have received the certificate for ISO 9001:2015 and ISO 13485: 2016 and have been deemed compliant for design, development, manufacture, installation and service of our entire range of IVD analyzers and reagents at this facility as well.

All our other manufacturing facilities at Mumbai, Daman, Baddi and Sikkim are already ISO and ICMED certified and have been employing GMP and rigorous quality standards and meeting the requisites laid down by ISO and ICMED.

We are now aiming to boost our annual production capacity by 50% and facilitate manufacturing of new products that are in the pipeline and are likely to be launched in the near future.

In these trying times, while the focus is on increasing testing capacities, we would once again like to assure our doctors, healthcare professionals and patients, the Transasia-Erba group continues its legacy of offering the highest quality analyzers and reagents to ensure accuracy and precision for timely diagnosis.
