

Tata Trusts to augment critical care skills for COVID-19 management

27 May 2020 | News

The curated 22-hour on-line training programmes are meant for specific staff chosen by identified hospitals and are provided free of cost

Tata Trusts and the Tata group have tied up with two renowned medical institutions to assist health care professionals augment skills in critical care in the management of Covid-19. The two institutions are Christian Medical College (CMC) Vellore and Care Institute of Health Sciences (CIHS) Hyderabad.

The Trusts' intervention follows the Chairman, Mr. Ratan N. Tata's statement that "urgent emergency resources need to be deployed to cope with the needs of fighting the Covid-19 crisis, which is one of the toughest challenges the human race will face."

The curated 22-hour on-line training programmes are meant for specific staff chosen by identified hospitals and are provided free of cost.

Tata Trusts believes that ICU Physicians and Intensivists, specialised in critical care management, will require support of a wider cohort of doctors, nurses and paramedical staff to treat Covid-19 patients. The intent of the training programmes is to meet this need by acquainting non-ICU professionals with the fundamental principles and practices of critical care.

The training includes essentials of interventions and procedures in ICUs, orientation of critical care skills like airway management and ventilator management, and how to triage a criticality as mild, moderate or severe and refer cases to appropriate facilities. The programmes will also cover essentials of managing variegated facilities for Covid-19 management, such as isolation centres, quarantine centres, and management of service areas and patients with mild illness.

There are two different methodologies of training available either through live webinars or prepared modules accessible on laptops, desktops or mobile phones. CMC Vellore's method trains and develops master trainers, who in turn can coach wider groups in their respective facilities. CIHS Hyderabad's method directly trains small groups. Both the institutions have designed their programmes such that participants can provide the required support to their Intensivist and ICU colleagues should the need arise.

This is the fourth such intervention of Tata Trusts to support India in its Covid-19 response.
