

Modicare launches 5 layer premium protection mask

07 August 2020 | News

Modicare masks are tested by Government approved NABL laboratory & are launched at an affordable price

Delhi based Modicare Limited, one of India's leading direct selling company has recently launched premium protection masks that are tested by the government approved NABL laboratory.

Modicare's 5 Layer Premium Protection Masks are aerodynamically designed with wide face coverage, accommodate facial movements, minimize contamination and are made from lightweight, breathable fabric.

With a 5-Layer Filtration System, the masks are designed to protect its users against harmful bacteria, droplets, dust and other pollutants along with providing BFE (Bacterial Filtration Efficiency) $\geq 96\%$ with a mean particle size of $3.0 \mu\text{m} \pm 0.3 \mu\text{m}$.

The innermost layer of the 5-Layer Particle Filtration System is an extra soft poly-fabric, which gives droplet protection, moisture control, mechanical stretch and microparticles filter, while the outermost layer is a mesh, constructed to create maximum breathability and also helps in filtering out bigger particles.

The middle three layers of the mask are made out of composite poly that helps in filtering out smaller particles. These masks are made up of the breathable fabric of good quality, have large ear loops for a comfortable fit, and are reusable up to 50 washes.
