

UniMask unveils antiviral treated mask that kills 99.94% virus

19 August 2020 | News

The masks are made of fabric treated with health guard technology which is well known for destroying SARS-CoV2, H1N1, bacteria and other harmful viruses.

Mumbai based UniMask has introduced a revolutionary mask that comes with antiviral treatment in the market to prevail the whole situation of COVID-19 pandemic. These masks are not only skin-friendly but also sustainable and environment friendly.

These newly launched masks are made using 100% breathable cotton fabric with anti-viral treatment on the fabric. The mask is processed using the healthguard technology from Australia which is well known for destroying SARS-CoV-2, H1N1, bacteria and other harmful viruses within minutes of coming in contact with the fabric. This technology is effective in destroying 99.94% of the virus that comes in contact with the fabric.

With the aim of reaching every household; this mask is priced at Rs 495. Crafted and designed with comfortable ear loop fasteners, adjustable Nose bridge, and comfortable chin elastic making the mask perfect for every face type and size.
