Tushti introduces range of oximeters and infrared thermometers

28 August 2020 | News

Oximeters & infrared thermometers have been known to flatten the COVID-19 curve in India

Delhi based Tushti International Pvt. Ltd. has recently announced the launch of finger-tip pulse oximeters and infrared/Non-contact thermometers in India, after recognizing the indispensable need for the products amid the COVID-19 pandemic.

The pulse oximeter & IR thermometers are based on all-digital technology and are intended for non-invasive measurement of functional oxygen saturation and body temperature respectively. Both products, now extremely useful for early detection and management of coronavirus, are cost-efficient and easy to use. Tushti has also roped in actor Sonu Sood as its brand ambassador.

Tushti's offerings boast of high quality and accuracy and hold certifications from international bodies such as FDA, WHO-GMP, CE, & QAA. The brand which is completely made-in-India, oximeters, and infrared thermometers are priced at INR 1,999/- and INR 2,999/- respectively, and come with a one-year warranty. The brand aims to educate people across the country about the correct use of the products, and how they are vital in gauging and keeping a close check on one's health, especially as we remain uncertain of how the pandemic unfolds.

Commenting on the launch of the products, Shobhit Agarwal, chairman-cum-managing director, Tushti International Pvt. Ltd. said, "We, at Tushti, noticed that many unbranded, or even fake products with zero credibility have been flying off the shelves, whether at pharmacies or online marketplaces. With bringing 100% made-in-India oximeters and IR thermometers into the market, we aim to remedy this problem of unreliable products and serve consumers with nothing short of the best."
