

ZiffyHealth makes vaccination available at doorstep

08 September 2020 | News

Easy documentation of vaccination history on ZiffyHealth app

In line with Prime Minister Narendra Modi's National Digital Health Mission, Pune based ZiffyHealth, India's first ever consumer-centric healthcare platform (HL7 technology), recently announced its flagship project of '*Vaccination on Wheels*'.

The program will provide vaccination to the children in their vicinity. The intent of the program is to ensure that the children get their necessary doses of vaccine in a hassle-free solution to the parents.

Besides vaccination, the ZiffyHealth app will provide an easy cloud-based solution to the parents to track and maintain the vaccination history of their children for their entire lifetime. It will also become the Digital Health Record of the children which will include an entire range of health analytics -including the history of medication and immunization. The program is currently launched in Pune and Patna.

Speaking on this initiative, Indra Jha, Chief Executive Officer, ZiffyTech Digital Healthcare said, "We at ZiffyHealth are delighted to present the "Vaccination on Wheels" program to simplify the life of parents during these uncertain times. Corona might be one disease which still has a vaccination to be developed. However, there are several other diseases for which a vaccination already exists. These doses need to reach the children even in uncertain times. With this program, we intend in making the necessary doses more accessible to the children. The ZiffyHealth App will also maintain the history of the vaccination doses to the children in cloud for their entire lifetime, and provide a hassle-free solution to the parents. We are currently launching this program in Pune and Patna, and will soon launch in other cities where we are present."
