

Niramai, Apollo Clinic offer contactless breast cancer screening services

21 September 2020 | News

The test is privacy-aware, radiation-free, and can detect the minutest of lumps

Bengaluru based Niramai Health Analytix, India's foremost and innovative AI-based breast cancer screening company has recently tied-up with Apollo Clinic, India's leading multi-specialty clinics by Apollo Health & Lifestyle (AHLL), to offer contactless, privacy-sensitive, breast cancer screening services to customers.

The screening services will be initially available at all Apollo Clinic clinics across Bengaluru, Hyderabad, Chennai, and Pune and will be ramped up pan-India in due course.

Customers will now be able to get themselves screened for their annual preventive breast screening and regular breast health check-ups. The test is appropriate for women 18 years and above and is privacy-aware, non-invasive, radiation-free and can detect the minutest of lumps or abnormalities. Customers can avail the screening service either at the various Apollo Clinic locations or can even book home-screening services through their nearest Apollo Clinic centre.

Niramai's proprietary solution 'Thermalytix' uses a high-resolution thermal sensing device and a cloud-hosted analytics solution for analyzing thermal images using big data analytics, artificial intelligence and machine learning for reliable, early, and accurate breast cancer screening. This solution has led to 9 US granted patents and several prestigious awards.
