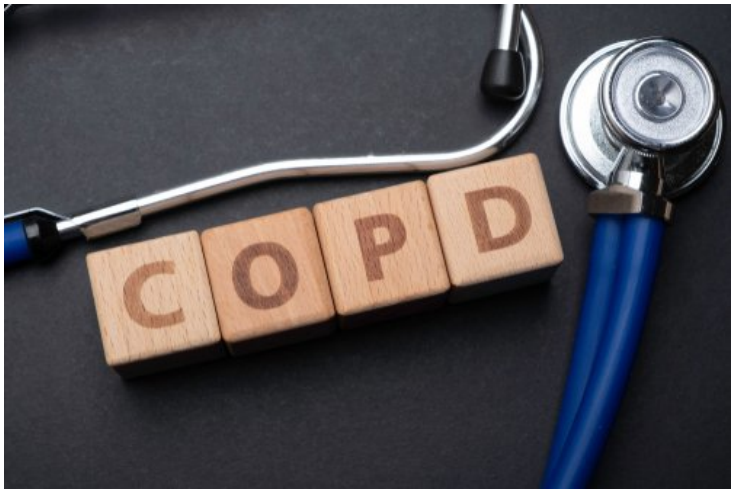
Zydus brings Indiaâ??s first pressurized metered dose inhaler

08 October 2020 | News

The Company has also filed a patent application for the novel process of this product



Zydus Cadila is launching Forglyn pMDI, India's first pressurized Metered Dose Inhaler (pMDI) with a combination of Long Acting Muscarinic Antagonist (LAMA) and Long Acting Beta Agonist (LABA) for patients suffering from Chronic Obstructive Pulmonary Disease (COPD) in India.

Forglyn pMDI is priced at Rs. 495 per pack and has been developed in-house using Zydus' innovations in formulation technology. The administration of the two drugs Formoterol fumarate (LABA) + Glycopyrrolate (LAMA) in a single inhalation will improve outcomes due to the desired synergistic effect of the two drugs and a better adherence to the treatment.

Speaking on the development, Managing Director, Cadila Healthcare Ltd., Dr. Sharvil Patel said, "Our focus has always been on helping people lead a better quality of life and making therapies accessible and affordable to people. Our innovations have brought in next-generation therapies in respiratory, women's healthcare, cardio-metabolic disorders, gastrointestinal and pain management segments. With this new technology, we hope to bring much relief to patients suffering from COPD and help them improve their health and quality of life."

The novel process for Forglyn pMDI developed at the group's Pharmaceutical Technology Center, ensures that delivery of the two drugs administered simultaneously through the inhaler are consistent and uniform which is critical for inhalation products. The process technology employed for the manufacturing of this product is simple, affordable and scalable. The Company has also filed a patent application for the novel process of this product.
