

Aster RV launches world class epilepsy clinic

18 November 2020 | News

The clinic will have certified epileptologists trained in adult and paediatric epilepsy, supported by a multi-disciplinary team to address the complex needs of both adults and children suffering from epilepsy.

On the occasion of National Epilepsy Day on 17 November, Aster RV Hospital, a multi-specialty quaternary care hospital in Bengaluru, has launched a specialised Epilepsy Clinic in the city. The clinic will have certified epileptologists trained in adult and paediatric epilepsy, supported by a multi-disciplinary team to address the complex needs of both adults and children suffering from epilepsy. Patients can access specialised treatment for new onset seizure, complex epilepsy, epilepsy surgery, PNES treatment and ketogenic diet plan.

Epilepsy is the fourth most common neurological disease in India with an estimated incidence of about 12 million patients in India. This amounts to a whopping 1/5th of the global burden. Social discrimination, stigma and lack of awareness about the treatment options available to cure or manage epilepsy patients remain some of the major issues in reducing the burden of epilepsy in India.

Dr Keni Ravish Rajiv, Consultant – Neurologist and Epileptologist, Aster RV Hospital said, “With medical advancements, it is entirely possible to manage epilepsy and even completely cure it. With the launch of this clinic, we aim to create more awareness about epilepsy, acceptance and relief from this condition, and reduce some of the social discrimination faced by epileptic patients in schools, workplaces, marital life etc.”

It is estimated that about 7-14 out of 1000 people in developing countries are suffering from active epilepsy at any given moment throughout the world.

“Despite the high numbers, the number of people who are able to access proper treatment for epilepsy is less. In India, the treatment gap is estimated to range from 22 per cent in urban areas to as high as 90 per cent in rural areas. It is important that these people gain access to trained epileptologists backed by a multidisciplinary team where mental health and the co-morbidities associated with epilepsy will be addressed as well,” said Dr Sreekanta Swamy, Head of Neurology, Aster RV Hospital.
