Lupin launches Mycophenolate Mofetil tablets

29 December 2020 | News

Mycophenolate Mofetil tablets USP, 500 mg, are the generic equivalent of CellCeptÂ® tablets of Roche Palo Alto LLC, indicated for the prophylaxis of organ rejection in recipients of allogeneic kidney, heart or liver transplants, and should be used in combination with other immunosuppressants

Lupin Limited, a global pharmaceutical company, announced the launch of Mycophenolate Mofetil tablets USP, 500 mg, after Lupin's alliance partner Concord Biotech Limited (Concord) received an approval for its ANDA from the United States Food and Drug Administration.

Mycophenolate Mofetil tablets USP, 500 mg, are the generic equivalent of CellCept® tablets of Roche Palo Alto LLC, indicated for the prophylaxis of organ rejection in recipients of allogeneic kidney, heart or liver transplants, and should be used in combination with other immunosuppressants.

Mycophenolate Mofetil tablets USP (RLD: CellCept®) had an annual sales of approximately $87 million in the US (IQVIA MAT October 2020).
