Aster Labs launches QR codes for COVID-19 reports for Dubai

25 February 2021 | News

This announcement has been made keeping in line with the new guidelines released by Dubaiâ??s Health Authority

Aster Labs
THE TRUE TEST

Aster Labs, the diagnostics arm of Aster DM Healthcare, a leading healthcare service provider in the country, has announced the launch of QR codes in all its COVID-19 reports to aid authorities in scanning and verifying the reports online.

This announcement has been made keeping in line with the new guidelines released by Dubai's Health Authority that mandates travellers entering Dubai to have QR codes on their COVID-19 reports. This will further help the authorities in efficient COVID-19 testing and reporting.

Along with QR codes, the reports provided by Aster labs will also share information on the date, time of sample collection, sample reporting and will enable access to the original test report stored in the company's secure LIMS server.

KR Jayaprakash, Chief Operating Officer, Aster Labs, said: "We are happy to comply with the new QR code guidelines released by Dubai's Health Authority. These guidelines will not only promote quality testing and reporting of Covid results but will also ensure the authenticity of the report of the passengers travelling from Bengaluru to Dubai. All the passengers travelling via Bengaluru will be able to take these tests and will be provided with QR-coded test reports. With our digitally enabled workflow, we have been able to meet these new guidelines with zero downtime and are ready to provide all the necessary assistance to the customers travelling to Dubai."
