Allabout Innovations launches ion-based COVID-19 solution

23 April 2021 | News

TheÂ device has been tested and approved by Rajiv Gandhi Centre for Biotechnology

Allabout Innovations has come up with one of its kind ‘ion-based COVID solution’ - ‘Wolf Airmask’ to let you breathe fear free. It is the only device in the world that can produce 100 per cent negative ions efficiently to an area of 1000 sq ft and 10,000 cu ft. However, the range of the device can be enhanced to suit even larger areas. It produces no positive ions or ozone that is harmful to nature. The Wolf Airmask is also the only device tested against the SARS-CoV-2 virus.

The device has been tested and approved by Rajiv Gandhi Centre for Biotechnology (RGCB). The organisation has certified the device to be capable of neutralising the COVID viral load in the air and surfaces by 99.9 per cent. Wolf Airmask has been successfully tested against other viruses and MS2 bacteria as well.

The Wolf Airmask can discharge up to 100 trillion negative ions per cm3/second which bind with the surface protein/spike protein of coronavirus or any other harmful virus and microbes present in the air and neutralise it. When the device is placed in an area, it ensures that the nearby premises are purified within no time.

Sujesh Sugunan – Chairman, Allabout Innovations, commented, “Over the last 10 months, we have been doing extensive research to come out with a solution that can effectively safeguard one's surroundings and provide real-time protection from coronavirus. Wolf Airmask is that product.”

The non-regulatory medical device is designed for easiness and comfort as it is plug & play and requires no maintenance for 70,000 hours (approx eight years). The cost is just Rs 29,500 to secure an area of 1000 sq ft and 10,000 cu ft. The device can be easily installed in corporate offices, commercial spaces, residential places, hotels & restaurants and spas & saloons among many others.
