

US-based Greenway Health opens office in Bengaluru

17 June 2021 | News

Expansion strengthens company's ability to deliver high-quality products and services to its ambulatory care clients

US-based Greenway Health, a leading health information technology services provider, has announced it has expanded its operations with a recently launched office in Bengaluru.

The expansion follows a period of innovation for Greenway, a Vista Equity Partners portfolio company, and signifies the company's commitment to rapid product and software execution, revenue growth and client success.

Throughout the last year, Greenway significantly adapted its approach to meet client needs in response to COVID-19 and the new healthcare environment, including new collaborations, the launch of new solutions and the appointment of new C-level executives to its leadership team.

The opening of an office in Bengaluru will further the company's ability to deliver innovative, customizable health technology solutions and service to its clients.

"Greenway is committed to improving lives through innovative solutions. This year we have doubled down on our commitment to client success as our top priority and further enhanced the overall client experience. This includes delivering high-quality products on a rapid timeline and enabling more frequent communications," said Pratap Sarker, president of Greenway Health. "Expanding our operations and workforce globally not only helps us further our mission, but ensures Greenway thrives in any environment so our clients can continue providing quality patient care – no matter the circumstances."

At the start of 2021, Prasan Sathyamoorthy was hired as general manager of Greenway India, working alongside a seasoned leadership team with experience in setting up and scaling India Centers.
