

B Medical Systems offers cold chain solutions to Dr Reddy's for Sputnik V roll-out

29 June 2021 | News

B Medical Systems will install several hundreds of vaccine freezers across the country for the national roll-out of Sputnik V vaccines

B Medical Systems has partnered with Dr Reddy's for providing reliable cold chain solutions for the pan India rollout of Sputnik V vaccines. Under this collaboration, B Medical Systems will install several hundreds of vaccine freezers across the country for the national roll-out of Sputnik V vaccines.

Under this collaboration, B Medical Systems will offer its vaccine freezers that provide a storage temperature as low as -25°C. The units were dispatched by air cargo from Luxembourg to meet the immediate requirements.

As a part of this collaboration, B Medical Systems' freezers will be placed across all major hospital chains in the country this week. The vaccine freezers from B Medical Systems are WHO PQS certified and certified class I medical devices. The units have been used across the world and have proven their reliability even in extreme hostile weather conditions.

B Medical Systems recently started its India operations and is ramping up its production to meet the significant demand for its cold chain products including vaccine refrigerators and vaccine transport boxes. As a part of its India operations, B Medical Systems is also introducing flexible leasing models and various service packages.

"Our technology ensures that vaccines stored inside are not exposed to any temperature excursions and are maintained at their fullest efficacy. Our remote monitoring solutions ensure that there is end-to-end traceability of the storage conditions," Jesal Doshi, CEO, B Medical Systems India.
