

RDIF, Morepen Labs produce test batch of Sputnik V vaccine in India

06 July 2021 | News

The first batch will be shipped to the Gamaleya Center for quality control

The Russian Direct Investment Fund (RDIF, Russia's sovereign wealth fund) and New Delhi-based Morepen Laboratories, have announced the production of the test batch of the Russian Sputnik V coronavirus vaccine in an exclusive facility in Himachal Pradesh. The first batch will be shipped to the Gamaleya Center for quality control.

RDIF and Morepen Labs signed a cooperation agreement in June 2021 and are actively implementing the technology transfer aiming to produce 850 million doses of Sputnik V in India per year sufficient to vaccinate 250 million people.

Kirill Dmitriev, CEO, Russian Direct Investment Fund, commented, "As the pandemic is yet far from over and new, more dangerous variants of coronavirus are being detected in various regions of the world, RDIF is increasing capacities for the production of Sputnik V in India, one of the key hubs. Agreement with Morepen Laboratories provides for a larger amount of Sputnik V to be available both for India and our partners globally to speed up the vaccination with one of the best vaccines in the world."

Sushil Suri, CMD, Morepen Laboratories, said, "We are delighted to partner with RDIF for the prestigious project of Sputnik V production in India. This would be our privilege to work jointly on expanding the production base in India. We take this partnership as a starting point for a long term relationship with RDIF and its partner companies as we look forward to many more areas of common interest. Morepen's commitment towards this project is a step forward towards entry into biosimilars and other biologicals."
