

A unique IQ test made in India to understand how the brain works

20 July 2021 | News

This test assists clinicians in the diagnosis of impairment of cortical functions

Dr Jagannath Prasad Das, the Emeritus Director of the Center on Developmental & Learning Disabilities and Emeritus Professor of Educational Psychology at the University of Alberta, Canada, has launched BBIT or the Brain-Based Intelligence Test, a unique IQ test, made for Indian population with a passion to find the answer, unmatched in scope and power that represents a major advance in understanding how our brain works.

The IQ test is born out of thorough research and greater vision by a team of eminent psychologists from Hyderabad led by Dr JP Das.

This unique IQ test, made for Indian population with a huge sample size, enables educators and curriculum developers to enhance the cognitive processes for a robust foundation in academic learning, especially in reading and math.

This test also assists clinicians in the diagnosis of impairment of cortical functions as evident in conditions like stroke, epilepsy, and traumatic brain injury.

Additionally, this test has diagnostic criteria to identify hyperactivity and specific learning difficulties in children.
