

Bharat Biotech launches global Chikungunya vaccine Phase II/III trial in Costa Rica

25 August 2021 | News

The trial is supported by the Ind-CEPI mission of the Department of Biotechnology

South Korea-based International Vaccine Institute (IVI) has announced that the first participant has received Bharat Biotech's Chikungunya vaccine candidate (BBV87) in Phase II/III clinical trial in Costa Rica, marking the start of a multi-country study led by IVI in partnership with Bharat Biotech International Ltd (BBIL) and funded by the Coalition for Epidemic Preparedness Innovations (CEPI) with support from the Ind-CEPI mission of the Department of Biotechnology (DBT).

IVI is advancing clinical development of BBV87 through a Phase II/III randomised, controlled trial to evaluate the safety and immunogenicity of a 2-dose regimen of BBV87 Chikungunya vaccine in healthy adults at nine clinical trial sites across five countries with endemic Chikungunya.

In addition to the trial at Clinica San Agustin in Costa Rica, trials are expected to begin in Panama and Colombia by September 2021 and in Thailand and Guatemala soon after.

The Global Chikungunya vaccine Clinical Development Program (GCCDP) seeks to develop and manufacture an affordable Chikungunya vaccine with the aim of achieving WHO prequalification to enable its distribution in low- and middle-income countries, consistent with CEPI's core commitment to equitable access, affordability and sustainability.

As needed, CEPI or BBIL may propose a third-party for manufacturing of a stockpile of the investigational product to be used for further clinical trials in outbreak conditions to advance vaccine development, or pursuant to an emergency use authorisation in emergency situations based on national or international guidance (such as by the WHO).
