Agilent emphasises on growing digital pathology market

02 September 2021 | News

Agilent and Visiopharm expand collaboration with worldwide distribution agreement

Agilent Technologies has announced the signing of a worldwide distribution agreement with Visiopharm, enabling Agilent to co-market Visiopharm’s portfolio of CE-IVD marked artificial intelligence (AI)-driven precision pathology software in addition to Agilent’s portfolio of automated pathology staining solutions.

With an initial focus on Europe, this agreement marks Agilent's first entry into the growing digital pathology market and strengthens the relationship between the two companies by further expanding the scope of their long-term collaboration.

Digital pathology is experiencing rapid growth worldwide, with its adoption expected to double by the end of this decade. As the use of digital pathology increases, AI-driven pathology solutions are emerging as the new standard. These solutions can provide diagnostic decision support and productivity enhancements that enable pathologists to improve diagnostic accuracy and workload management.
