

Atal Incubation Centre at Shiv Nadar University picks new health-tech startups

03 September 2021 | News

To be supported by technology/knowledge partners

The Atal Incubation Centre at Shiv Nadar University, Delhi-NCR (AIC-SNU), has chosen 25 technology startups, including 3 healthcare/medtech startups (A2Z Medical; Soundclear; Sparcolife Digital Healthcare Technologies) to support over the next 12 months as part of its comprehensive incubation programme.

These startups were selected from more than 230 applications to the Incubator's 'Venture Challenge' contest, received from more than 20 states in the country.

The incubation programme includes physical and intellectual resources, trainings, access to industry mentors, opportunities for interactions with other business leaders, and access to angel investors for capital, among others.

AIC-SNU's Technology/Knowledge Partners, Dassault Systèmes and HCL Technologies, will provide these startups extended support to scale up their ideas, provide technical support, market guidance, and access to their networks of key contacts for growth.

AIC-SNU works closely with leading investors networks, Agility Venture Partners, Indian Angel Network (IAN), and 100X.VC, to help budding and new start-ups seek capital funding.
