

Healpha launches app for personal health management

09 September 2021 | News

The Healpha app allows patients to manage health records, history, vaccination, surgeries etc

Hyderabad-based Healpha, a digital healthcare startup, has launched its app. The application seeks to improve the ability to manage every individual's health and wellbeing.

It enables comprehensive management tools for both patients and doctors covering preventive, curative and managed connected healthcare for telemedicine and in-person care. Its unique connected devices via a smartphone companion app make remote patient monitoring robust.

The new app aims to help patients search for medical conditions and find related healthcare providers quickly and efficiently, and is available on Android and via a web portal, IOS is being released.

"We believe that the newly launched app will play an important role in providing patients with an effective way out that can improve patient outcomes," said Raj Janapareddy, Founder & CSO, Healpha.
