Roche launches cobas pure, to offer more than 230 tests

30 September 2021 | News

Cobas pure provides clinical labs with access to more than 230 diagnostic tests

Roche Diagnostics India has launched cobas pure integrated solutions analyser. The new compact analyser combines clinical chemistry, immunoassay and Ion Concentration Measurement (ISE) diagnostic testing on a single platform helping labs simplify daily operations with limited space and resources.

Cobas pure analyser offers the longest onboard stability of reagents allowing labs to expand their test menu.

With a footprint of just two square metres, cobas pure provides clinical labs with access to more than 230 diagnostic tests across a wide range of disease areas including infectious diseases, oncology and cardiology.

Narendra Varde, MD, Roche Diagnostic India, and Neighboring Markets said, “Cobas pure offers diverse critical and complex tests for patients. This consolidation of the test menu would enable labs to speedily perform hundreds of different tests using just a single test tube of the blood samples from patients. Through cobas pure, the consolidated test menu can reach beyond metros into a large number of cities where testing menu may be presently limited.”
