Narayana Health invests in robotic-assisted surgery prog

29 October 2021 | News

Dr Devi Shetty inaugurates da Vinci X system at Narayana Health City Bengaluru

Narayana Health announced the installation of the latest robotic-assisted surgery (RAS) technology, the da Vinci X, by US-based Intuitive, at their Bengaluru centre- Narayana Health City. Dr Devi Shetty, Chairman and Executive Director, Narayana Health inaugurated the new system in an event held at Mazumdar Shaw Medical Centre, Narayana Health City, Bengaluru.

The da Vinci X technology, known for its better patient outcomes, is also associated with lesser pain, less blood loss, shorter hospital stay, and even minimal post-operative complications in certain cases. In addition to that, da Vinci X brings across some innovative features including voice and laser guidance systems, a lightweight endoscope, and the same control console and 3D optics system that lets surgeons see into the patients as they operate the device. These benefits go a long way in enabling the surgeon and care teams in providing life-enhancing care for their patients.
