

Solve.Care launches healthcare development portal Care.Labs

08 December 2021 | News

Physicians and developers can learn about the Solve.Care Platform, its components, find out how to create their own Care Network

Solve.Care has launched a new development portal Care.Labs. Care.Labs will help to guide both physicians and developers in designing and creating Care Networks on the Solve.Care decentralised blockchain platform.

Care.Labs collate documentation, tutorials, videos, support blogs, and guides, making it easy for practitioners to learn the basics and start creating the healthcare decentralised Care Networks.

This is the first release of the developer portal, where physicians and developers can learn about the Solve.Care Platform, its components, find out how to create their own Care Network, and build one by experimenting with a sandbox using Solve.Care's dedicated GitHub repository.

The Care.Labs development portal will continue to evolve as more functionalities and tools are added to it. This will provide physicians and developers with the ability to build even the most complex Care Networks with ease. Solve.Care is empowering each physician with digital capabilities never seen before, beginning with this new launch.
