

Healthians, QRX to launch 30-min rapid PCR testing for COVID-19

13 December 2021 | News

The Saral Test for COVID-19 detection uses the RT Lamp Technology

Delhi-NCR based startups QRX and Healthians have joined hands in procuring and maintaining the applicable license for Rapid PCR tests based on RT Lamp technology (called SARAL TEST) provided through the labs and testing facilities of Healthians. The test provides instant credible results in 30 minutes and is ICMR approved.

The partnership between QRX and Healthians for providing Rapid PCR Tests for COVID-19 will help in taking the testing to the doorstep of the common man and commercial business hubs through collection centres as well mobile van testing facilities. QRX and Healthians will jointly partner in terms of setting up the infrastructure for the testing mobile vans and operating them.

The Saral Test for COVID-19 detection uses the RT Lamp Technology that's the latest and quicker method of testing for COVID-19. LAMP stands for Loop-mediated Isothermal Amplification, is an assay that can be used for SARS-COV-2 viral RNA detection. Reverse-transcription LAMP (RT-LAMP) allows for quicker analysis of genetic material than traditional PCR and is proven to be successful in the detection of the COVID-19 virus.
