

Mental health app NEURIA by Innoplexus forays into Indian market

21 January 2022 | News

Seeks to support patients living with mental diseases

NEURIA, a free mobile application, developed by German firm Innoplexus, has now been launched in India. NEURIA seeks to support patients living with mental diseases to enjoy a better quality of life by providing individualised information on their options for treatments, clinical trials, and experts.

“Diseases such as Dementia and Parkinson’s are too often stigmatised as just ‘symptoms of old age’” highlighted Juergen Scheele, Chief Medical Officer, Innoplexus. “Through NEURIA, we want to challenge the status quo and support people living with neurological diseases to have a normal life for as long as possible.”

“We’re committed to changing what it means to be diagnosed with a neurological disease – and this means giving patients and their carers the tools they need to get the best treatment journey possible”, underscored Dr Gunjan Bhardwaj, CEO and Founder, Innoplexus.

The NEURIA app is available for download now in India on Android and iOS.
