A positive step towards prioritising the role of digitisation in healthcare: Torrent Group

02 February 2022 | Views

Samir Mehta, Chairman, Torrent Group

"The initiative of rolling out an open platform for the National Digital Health Ecosystem consisting of digital registries of health providers and health facilities, unique health identity and universal access to health facilities is a positive step towards prioritising the role of digitisation in the overall healthcare ecosystem. Launching the National Tele Mental Health programme under the expert guidance of NIMHANS as the nodal organization is another extension of the digital health mission while improving the quality of life of citizens. The planned increase in capital expenditure is likely to boost economic growth and employment."
