

HLTH.network unveils app to transform India's healthcare vertical

18 February 2022 | News

The app aims to help its users lead a healthier life by incentivising them in the form of HLTH tokens, which they can use to buy supplements from HLTH.store

London-based HLTH.network has launched its app, HLTH.run, in India. Acting as an extension to their healthy routines, the app intends to make exercising/running more interesting and engaging for its users with easy UI and exciting features.

The newly launched app is committed to making healthcare secure, accessible, and affordable to all global citizens, focusing on expanding in India. The core team of 37 people are working continuously to make the app more user-friendly and add the latest features to give the clients a seamless experience.

HLTH.run will aid the users in leading a healthier life by incentivising them in the form of tokens. They will earn HLTH.tokens, a cryptocurrency, by indulging in physical activity. The tokens will be credited to the users' HLTH.wallet, which they can use to buy vitamins and other supplements available at HLTH.store.

Besides earning HLTH tokens, the users can compete with their friends, earn badges, track their workout history, and set goals for themselves.
