

## Actu-Real collaborates with Jehangir Clinical Dev Centre

24 February 2022 | News

**The joint initiative is called J-ARC Healthcare Solutions**

Actu-Real a US-based specialised Contract Research Organization (CRO) focused on data analytics and Real-World Evidence (RWE) and Jehangir Clinical Development Centre (JCDC), a pioneering CRO conducting world-class clinical research in India, today announced the signing of a strategic collaboration agreement to further research based on RWE.

Through this collaboration, Actu-Real and JCDC will focus on collecting and analysing real-world data (RWD) generated from clinical practice to support evidence-based clinical, economic and regulatory decisions. The widespread use of mobile devices and electronic health records to gather and store huge amounts of health-related data facilitates such studies further.

J-ARC's experience across the continuum of clinical development and post-approval research, global delivery model and expertise in design, conduct and analysis places it in a unique position to support such studies. The scientific and research community including pharma, biotech, research institutes, hospitals and healthcare companies will greatly benefit from this collaboration.
