Karam Safety diversifies healthcare range with launch of K-air face masks for children

14 March 2022 | News

In addition to surgical face masks, Karam Healthcare range includes K-air N95 Disposable Face Masks available in both headbands and ear loops

Karam Safety , a leading manufacturer and marketer of Personal Protective Equipment (PPE), has launched Karam Healthcare (K-air) Face Masks for children.

These new kid-sized masks are available in exclusive designs and will help parents prepare for their young ones to participate in outdoor activities, especially since they will be heading back to school.

Designed for children between the age group of 4-12 years, the all-new K-air FFP2 SL D Respirators offer maximum coverage over the mouth and nose of the child.

The FFP2 SL D Respirators for kids come after Karam's diversification into the Karam Healthcare range earlier last year. The brand also manufactures FFP2 'Disposable Face Masks Range' that offers uncompromised protection against viruses, bacterial microorganisms, dust, pollen, smoke and provides easy breathability. The brand also has surgical masks and surgical tie back masks in its range to filter air contaminants, bacterial microorganisms, dust, pollen and smoke.
