VAV Life Sciences to support academic research in lipid nanomedicine

24 March 2022 | News

A slew of research benefits to universities and academic institutions

Mumbai-based VAV Life Sciences has offered to support academic research on advanced lipid-based novel drug delivery systems (NDDS) used in medical, cosmetics, and nutritional therapies.

The company has announced a slew of research benefits to universities and academic institutions around the world that take up research in lipids.

VAV is offering guidance in analytical techniques, research assistance in characterisation, and project guidance. Its subject matter experts will assist university research students in selecting the right grade and writing the project protocol, and standard operating procedures.

In addition to this, the company will provide complementary lipid samples that are otherwise not easily available and are expensive to procure. Universities and research institutes interested in developing and testing lipids can also avail of VAV’s world-class GMP facilities for research and development.
