

MedisimVR raises Rs 3.5 Cr in Pre-Series A round

24 March 2022 | News

The funds will be used for scaling up the product offering and adding more skill training content to their library

Chennai-based MedisimVR, a med-tech startup working in the field of healthcare simulation, has raised Rs 3.5 crore in a Pre-Series A round led by Inflection Point Ventures.

The round saw participation from Chennai Angels and Jana Balasubramaniam (MedTech investor). The funds raised will be used for scaling up their product offering and adding more skill training content to their library.

MediSimVR aims to make comprehensive medical training accessible and affordable across the world through the current offerings which include procedural simulation, virtual patient simulation and clinical education. They have been able to onboard almost 500 medical students in the last four months.

The key product offered by MediSimVR is the Virtual Reality based skill training platform, that covers all the skills required in the MBBS curriculum. Some of the other features include performance analytics & evaluation metrics to better assess the learning pattern & competency.
