Mahajan Imaging opens diagnostic facility for precision and predictive medicine

11 April 2022 | News

The new integrated centre of excellence in diagnostics inaugurated in Delhi

Mahajan Imaging has forayed into precision and personalised medicine by launching an integrated centre of excellence in diagnostics at Safdarjung Development Area, New Delhi. The new centre combines state-of-the-art technology in medical imaging with a full-fledged pathology and genomics lab as well as an R&D department and an AI startup.

Vice President of India M Venkaiah Naidu delivered the inaugural address at the launch of the new centre. He emphasised the need for early diagnosis through screening programmes and preventive health checks at the population level. He further remarked on the role of Public-Private Partnership and emerging technologies such as artificial intelligence in providing access to high-quality, affordable diagnostics across the country.

The centre, spread across five floors, is designed with aesthetics for maximum patient comfort and is equipped with state-of-the-art technologies including radiology and nuclear medicine. It consists of three MRI scanners, Dual Energy Spectral CT, Digital PET CT, Dual Head Gamma Camera, radionuclide therapy with Lutetium, Full Field Digital Mammography with 3DTomosynthesis, 3D / 4D Ultrasounds, Cone Beam Dental CT, DEXA bone densitometry, non-invasive cardiac lab, digital fluoroscopy, and radiography.
