

Sakra World Hospital collaborates with MyHealthcare

04 May 2022 | News

Launch patient-centric digital health ecosystem

MyHealthcare announced the launch of a patient-centric digital health platform in collaboration with Bengaluru-based Sakra World Hospital that will deliver 360-degree patient care outcomes. Through this collaboration, Sakra World Hospital will be using the MyHealthcare platform to accelerate its digital transformation journey, with the launch of the Sakra Patient Mobile App, AI-based EMR for digital prescriptions, integrated virtual consultation platform and more.

The platform aims to extend all Sakra World Hospital, Sakra Premium Clinic and Sakra Homecare services to patients, in the comfort of their homes. The digital ecosystem is also streamlining the patient journey within the hospital.

The Sakra Patient mobile apps serve as a single window, empowering patients to manage all their healthcare needs such as booking doctor appointments (physical or virtual), diagnostics tests at the hospital, preventive health check-ups, viewing their test results and other diagnostics reports, managing health for their families, view e-prescriptions and request for pathology tests or delivery of medicines at home. In empowering their health, the platform comes with built-in vitals trackers and health dashboards, and will soon have patient monitoring devices integrated as well.
